

TASTE THE REAL POWER!

HB 2000 HB 3100 HB 4700

Feast your eyes on three new Atlas Copco heavy breakers! The even higher percussive performance-to-weight ratio of these ingenious attachments, compared to their predecessors, will save you money! You can use a smaller breaker for the same jobs, your investment is lower, your running costs are reduced and the equipment lasts longer. Since you can use a smaller carrier, you use a lot less fuel as well. It's all money in the bank!

3 main moving parts only!

The new HB 2000, 3100 and 4700 breakers, which are replacing the HB 2200, 3000 and 4200 models, give you maximum performance with minimum weight. The valuable PowerAdapt feature, which helps to prevent overloads by switching off the equipment – preventing downtime and avoiding costly repairs, is now available on all breakers in the heavy range.

A PROVEN RECIPE

Developed to handle the toughest jobs, machines in the HB breaker range are genuine

heavy duty tools designed for millions of hits under the harshest conditions.

The fact that there are just three main moving parts: the control valve, the percussion piston and the working tool, means a lower risk of machine failure. In addition, Atlas Copco breakers are easy to service and maintain, which makes them suitable for a wide spectrum of applications.

HB breakers offer desirable features which can only be found on Atlas Copco hydraulic breakers.

PowerAdapt helps to avoid downtime and costly repairs. When hydraulic breakers are interchangeably operated on different carriers, there is a risk that they will be hydraulically overloaded due to incorrect oil pressure settings. PowerAdapt offers you the highest level of security, helping to prevent overloads by switching off the equipment, thereby preventing downtime and costly repairs.

Some tasty features

AutoControl boosts productivity by offering maximum percussive performance under all operating conditions.

ContiLube™ II is an automated feature offering optimal and cost effective lubrication.

Genuine working tools will help your Atlas Copco breaker continue to be a reliable, safe production unit, good for many millions of impacts.

VibroSilenced provides effective noise and vibration damping that puts Atlas Copco hydraulic breakers among the quietest on the market.

DustProtector II protects your breaker in dusty conditions. Unique with its two stages, DustProtector II offers sustainable, long-term and trouble-free operation.

▶ **Whatever the job – an HB breaker can handle it**

- Primary breaking
- Secondary breaking
- Demolition
- Tunneling
- Excavating and trenching
- Special applications, such as underwater and “hot” applications.

1+2 adds up to an extended warranty for hydraulic breakers

Atlas Copco's 1+2 program for hydraulic breakers gives you two years' additional warranty free of charge. The prerequisite for a warranty extension is that you register your new Atlas Copco breaker on the internet within 4 weeks of initial start-up. The warranty period begins on the date of purchase.

GREAT FEATURES...

- Three years' warranty period
- Unlimited operating hours
- Extension period covers the warranty risk
- Covers main components, including the piston

...REAL BENEFITS!

The benefits are considerable. At no extra cost your investment is protected and you get complete peace of mind. Just enjoy improved breaker availability and time to focus on your business. What's more – the resale value of the machine will be higher!

What does the 1+2 program cover?

All defects in materials and workmanship of the two, respectively four components, effecting performance of this product:

SB breakers

- Solid body
- Piston

MB and HB breakers

- Cylinder cover
- Cylinder
- Piston
- Lower hammer part
